

01.03.21 LO: Compare lengths.

Before doing this activity, please complete the practical ones as suggested on the video lesson, a photo of these would be great. After that, if you can print or have a printed copy of these caterpillars, please cut them out and order them from shortest to longest - this is the best way to physically compare them. If you are only working onscreen, you could number them with 1 as the shortest through to 5 as the longest.

Optional extension: measure them with a ruler in centimetres and answer:

1. How long is the longest caterpillar?
2. How long is the shortest caterpillar?
3. What is the difference between the longest and shortest caterpillar in centimetres?
4. Can you make your own set of play d'oh caterpillars and measure them and answer the three questions above about them?
