

02.02.21 LO: Compare heights

Before completing this sheet, please complete the practical activities as suggested on the video, a photo of these would be great.

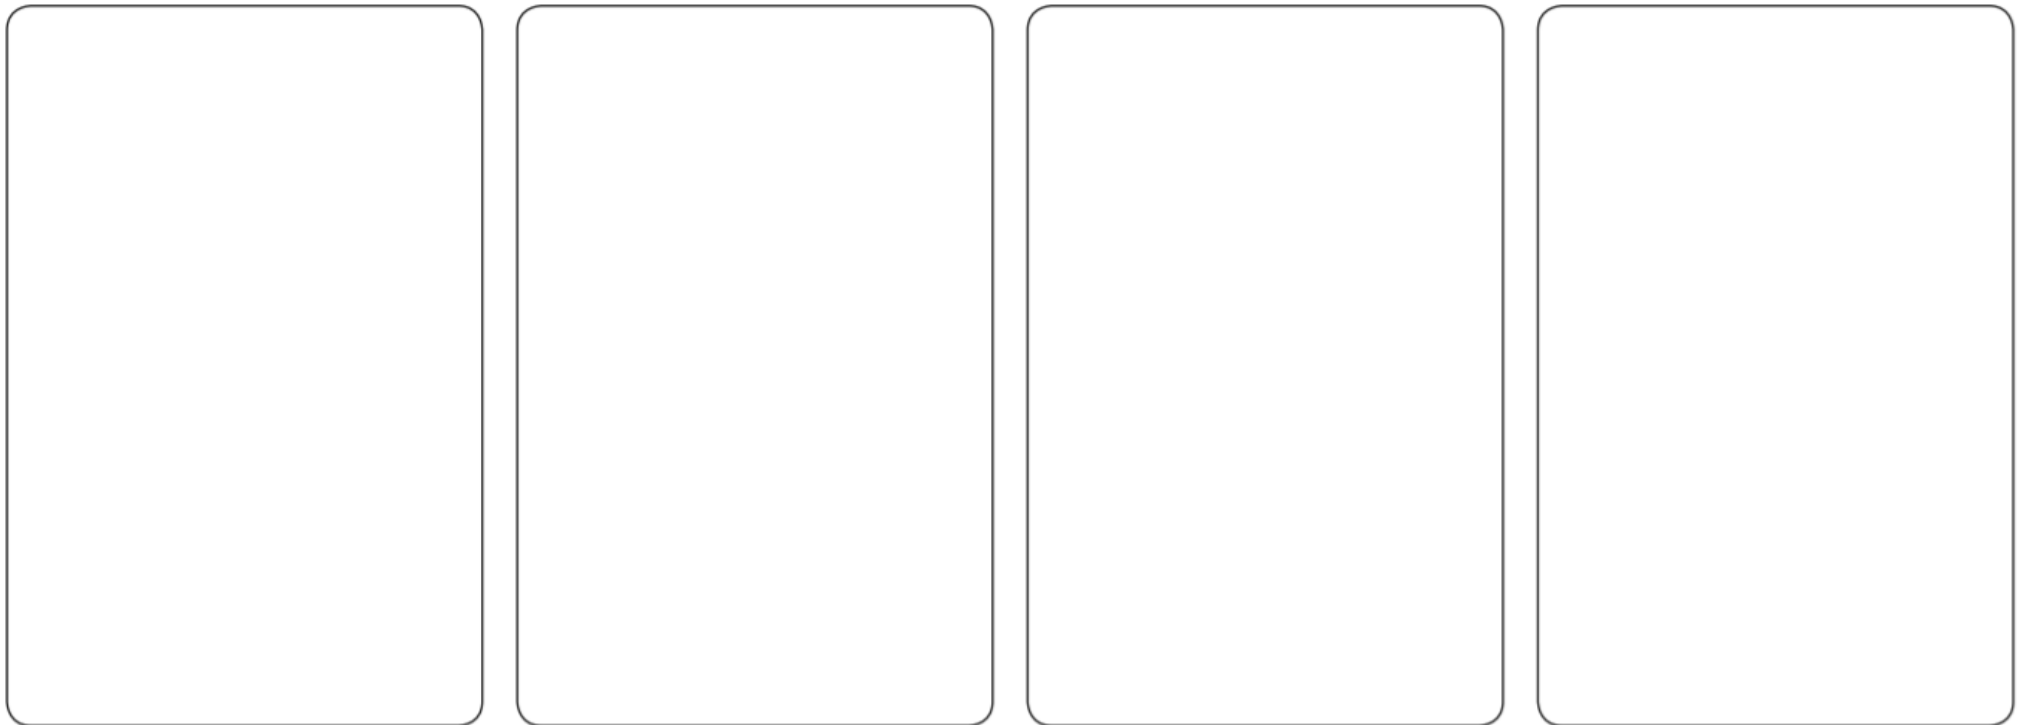

After that, please complete the ordering of heights of toys below - by completing the table you will need to draw an image of your toys that will not be to scale, but should show the height difference in how they are represented.

Optional extension, measure your toys with a ruler in centimetres, label them on your drawing and answer:

1. How tall is your tallest toy?
2. What height is your smallest toy?
3. What is the difference in centimetres between your tallest and shortest toy?

Can you put your favourite toys in order of size?

Take a photo or draw a picture of them in order from **shortest** to **tallest**.

Four empty rounded rectangular boxes arranged horizontally, intended for drawing toys in order of height from shortest to tallest.

shortest  tallest
