

Computing lesson 4

LO: Technology in our lives

For today's lesson I want you to think about all the technology you use every day.

Technology is objects that have been designed with a purpose.

Task:

I would like you to design a new piece of technology that serves a specific purpose. In your books, draw and label your design with all the key features.

You can be as imaginative as you like.

Maybe you want a robot vacuum that removes all the rubbish from the oceans or a cupboard that produces any snack you ask for!

Extras...

Why not create a prototype of your design using junk modelling?
