

Thursday 30.04.20 Maths Fluency

Those questions with (M) beside them should be tried mentally. Those with (W) are normally more efficient using a written method.

Answers:

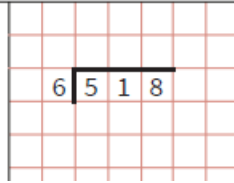

1	$\frac{2}{5}$ of 60 =			
		(M/W)	$60 \div 5 = 12$ (this is one fifth) then $12 \times 2 = \underline{24}$	

12	12	12	12	12
----	----	----	----	----

2	$32,764 - 21,863 =$			
		(W)	10,901	

3	$56 \div 10 =$			
		(M)	5.6	

4	$80 - 28 =$			
		(M)	52	

5		(W)	$86 \text{ r } 2$ or $86 \frac{2}{6}$ ($\frac{1}{3}$ simplified) or 86.33	
---	---	-----	--	--
